

SnapLogic Intelligent Integration Platform

Intelligent automation for your enterprise

The SnapLogic Intelligent Integration Platform (IIP) provides intuitive, connected, and scalable integrations for every user and with a single platform, empowers you to easily automate your data and application integrations and manage APIs. Unlike traditional integration software requiring painstaking coding by teams of developers, SnapLogic makes it fast and easy to create scalable pipelines and workflows that supply the right data to the right people at the right time. Functionally, SnapLogic's data streaming architecture along with JSON as a native format permits real-time processing with high throughput, powering the rapid movement of data across the enterprise. Lastly, SnapLogic's AI-powered Integration Assistant, provides expert guidance to swiftly build high-quality pipelines/workflows.

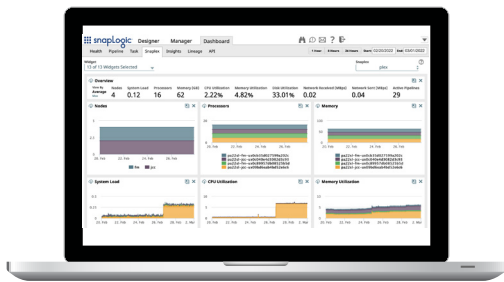

Intelligent Integration Platform Architecture

The SnapLogic Intelligent Integration Platform is purpose-built for next-generation application and data integration and API management requirements. The Intelligent Integration Platform manages orchestrations, schedules, connections, and security details through the Designer, Manager, and monitoring Dashboard. A Snapplex, a self-upgrading execution network that scales elastically based on data processing volumes, streams data between applications and data sources.

Platform: Self-Service UX

Cloud-based Designer to build integration pipelines; Manager to administer users and track integration assets; and Dashboard to monitor overall health and performance, all on a platform with zero-downtime. Additionally, SnapLogic Flows and Fast Data Loader are two purpose built user experiences built on the platform specifically for non-technical users. Flows allows business users to automate workflows while Fast Data Loader makes it easy to load data into cloud data warehouse with prepackaged pipelines.

Execution Grid: Snapplex

SnapLogic powers the automated enterprise. The company’s self-service, AI-powered integration platform helps organizations connect applications and data sources, automate common workflows and business processes, and deliver exceptional experiences for customers, partners, and employees. Thousands of enterprises around the world rely on the SnapLogic platform to integrate, automate, and transform their business. Learn more at snaplogic.com.

Provides elastic scalability; enables integration runtime both in the cloud and behind your firewall; does not store your data; supports enterprise data security standards; facilitates real-time streaming speeds; and is scalable to massive data volumes for your most demanding jobs.

Pre-Built Connectors: Snaps

600+ Snaps connect most commonly used ERP, CRM, Marketing, Service, Collaboration, Notification, Protocols, Standards, Databases, Data Warehouses, Big Data, IoT, Message Queues, and Transformations, plus an SDK to build your own custom Snaps.

“Of all our enterprise integration tools, I asked my team and our citizens developers, which vary from basic to experts, and when I challenged them all to propose a more user-friendly solution than SnapLogic, no one could.”

► **Jamie Locks, VP of Integration and App Development, Schneider Electric**
