

# How Employees Perceive AI

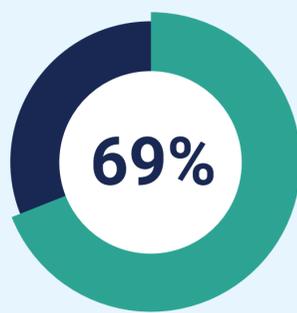

SnapLogic partnered with independent third party research firm, Censuswide, to survey 910 mid-senior management workers within large enterprises across the UK, US and Australia to understand their views on AI in the workplace.

## Would you use AI in the workplace?

Two-thirds of respondents like the idea of using AI in their role, either currently or in the future.

69% of respondents say their current company's culture is in support of adopting AI across the business.

But despite this positivity surrounding AI in the enterprise, respondents' perception is that skills are still an issue.

1/3

34% of respondents said there are very few people within their organization with the skills required to implement and use AI.

## Respondents see AI in the workplace through two lenses

How it impacts them individually and how other people will react to it

When asked to think about the positives, the top response focused on understanding how AI will specifically benefit them in their role.

42%

When thinking about the negatives of AI, the biggest concern was that other people in the organization will not fully adopt AI.

39%

## Top benefits of using AI in the workplace

54% respondents said it will save them time

54%

46% respondents said it will improve their productivity

46%

37% respondents said it will reduce risk and errors in their work

37%

## What would make you more likely to use AI?

Respondents said they would be more likely to use AI in their role if:

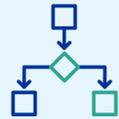

They had a better understanding of how it will specifically benefit them in their role

42%

They had a safety net to reduce the risk that they'll make mistakes

36%

If it fits naturally into their current workflow

34%

## SnapLogic AI makes integration powerful and simple

SnapLogic uses artificial intelligence to automate highly repetitive, low-level development tasks, eliminating the data and application integration backlog that stifles most technology initiatives.

Our "Iris AI" Integration Assistant software shortens the learning curve for line-of-business users to manage their own data flows, while freeing technology staff for higher-value software development.
